

## **DataFlex 2022**

### **Release Notes - Please Read Carefully**

For complete information about DataFlex 2022, please refer to the "**What's New in DataFlex 2022**" section of the documentation.

#### **Important Information for Existing DataFlex Users:**

- 1 DataFlex 2022 - 20.1 uses different DLL component naming and/or a completely separate registry branch from DataFlex 20.0 (and earlier). You may install and use DataFlex 2022 - 20.1 on the same machine as DataFlex 20.0 (and earlier) without interference.
- 2 The WebApp Server components of DataFlex 2022 - 20.1 can coexist with previous revisions of the WebApp Server on the same machine without interference.
- 3 Some of the changes that you have made in your DataFlex 20 development environment (registry settings that control utilities, editor customizations, etc.) will be automatically detected or used by DataFlex 2022 - 20.1. For those that are not imported, you will need to duplicate those changes manually. There are utilities that can assist you in migrating existing workspaces.

**Our Learning Center <https://learning.dataaccess.com> and Web Forums <http://support.dataaccess.com/forums> are constantly updated - they are excellent resources for the latest information about DataFlex.**

We also strongly recommend that you take a moment to read through the **Installation and Environment Guide** and the "What's New" section of the Help System.

Check our website regularly at <http://www.dataaccess.com> for the latest product releases, documentation updates, and other information.
